

<mark>SENSOLIST</mark> RTU/PM1200&2100

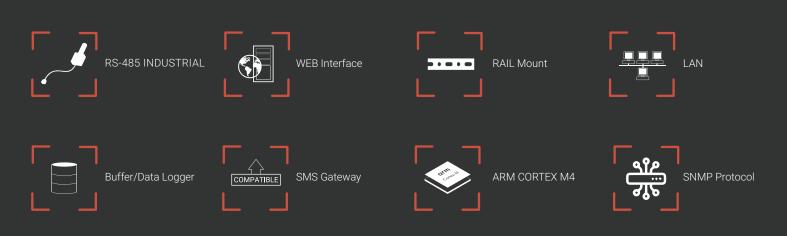

Description

This product is a smart device for monitoring PM1200 and PM2100 modules of Schneider Electric company. This module is usually used in electrical panels of data centers and server rooms, and its function is to display the current status and electrical quantities.

The SENSOLIST-PM1200 is responsible for collecting data from the PM2100 and PM1200 modules and transmitting it under standard protocols.

By supporting various communication protocols such as Modbus/TCP IP, SNMP, and Modbus/RTU, it can be integrated and monitored by SENSOLIST DCIM software, as well as all common software like SolarWinds, PRTG, OpManager, etc. This device has an internal web server that allows the status of variables to be viewed online.

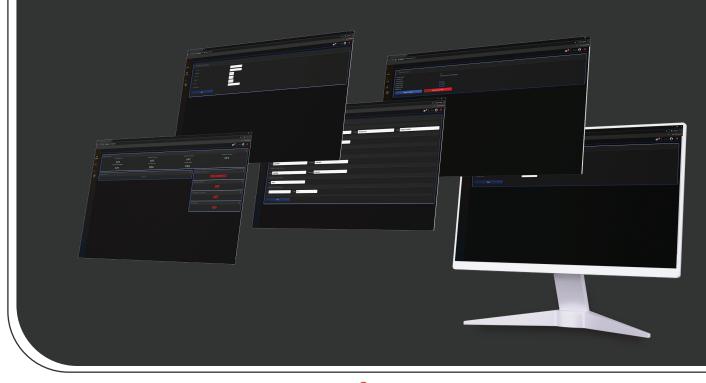

Features

	General	
Processor	ARM processor with encryption accelerator	S
Memory	-	
Operating System	Embedded RTOS	
Master Protocols	Modbus (RTU/TCP/ASCII)	
Slave Protocol	Modbus	
IP Communications	Web server , Modbus , Ethernet RJ45	
PoE Support	24V	
Power Supply	24 VDC	
SNMP	Agent Ver.1 , 2c , 3 , Trap	
	Channels	
Communication Channels	RS-485	3 🔮
	Physical	
	Rack Mounted	
Packaging	Wall Mounted	
	DIN-rail Mounts	
Environmental	-40°C to +70°C, %95-5 RH	
	Compatible With	
SENSOLIST-RTU Series		S
SENSOLIST-PSIM Series		
SENSOLIST-DCIM Series		

Internal Webserver

12022 Blue Valley Parkway, Suite 515, Overland Park, KS 66213, USA
Del Valle Industrial Park, Building #5, San Lorenzo, Puerto Rico
